

LEVERAGE to Speak at IWCE on March 27th - 28th

LEVERAGE is attending the International Wireless Communications Exposition at Las Vegas Convention Center on March 27th through March 28th. Our own Alan Gatlin, director of surveillance systems, SLE, transportation, and utilities, will be speaking at two panels.

Backhaul and Big Data: Getting Large Files Where They Need to Be – March 27th

Session # TH20: 2:00PM – 3:15PM.

Room S230

Description: LTE-based communications, high-definition video-surveillance systems and a general increase in inter-site traffic are all triggers for new IP-optimized backhaul solutions. In response to soaring demand, everyone is looking for the next big capacity solution. Whether it's a next generation microwave system delivering multi-gigabit capacity or a video-compression technology, examine the backhaul options that can be leveraged to deliver the largest files where they need to be, including how this affects smart cities and enterprises.

The Power (and Drawbacks) of Video – March 28th

Session # F02: 10:00AM- 12:00PM.

Room: S232

Location: Las Vegas Convention Center

Description: Examine different aspects of utilizing video in cities and campuses, with new portable systems and for public safety. What does it mean for situational awareness? How do you use video once an incident has happened? What are the analytics and storage options for video surveillance systems?

About Alan Gatlin: Alan Gatlin has worked in the wired and wireless communication field for more than 20 years and brings a depth of “real world” experience in the design and installation of outdoor wireless solutions and its integration into an IP network. Thought-out his career Alan had an opportunity to hold positions in System Engineering, Training, System Integration, and Business Development on both a Domestic U.S. and International environment. Alan has presented at various conferences and meetings including ISPCon, IWCE, Pacific Telecom Council, regional, and local CTIA, AWWA, and NCTA technical events where there is a need to take complex concepts and provide a clear message of applications and appropriate usage. Evaluating projects using a “systems” approach is the methodology Alan uses that examines each project from the prospective of the immediate needs combined with long-term growth opportunities. Having participated in the development and use of technology enables Alan to apply solutions from a prospective that provides for application that can be “non-traditional” and open greater options for networking solutions.

About IWCE: IWCE is the authoritative annual event for communications technology in the working world. Over 7,500 technology buyers from a diverse group of industry professionals from government, public safety, transportation, utilities and other enterprises gather together at IWCE to see the latest in effective and efficient communications systems. IWCE provides the foundation for the technology, operations, engineering and governance for your communications technology networks, systems and services.
